AQUATIC TECHNOLOGIES

www.aquatictechnologies.com.au

Aquatic weed spraying services using approved chemicals and water treatments.

Aquatic Technologies specialise in identifying what herbicides are required for each individual case scenario. We offer a variety of herbicides and means of applications to best suit many types of aquatic weed.

Aquatic Technologies is equipped to undertake the spraying and application of various approved chemicals and water treatments in all types of aquatic environments, including potable water storages, waste water lagoons, mining lagoons, irrigation dams, rivers, marshlands and swamps.

Applications include:

- Algae control, algaecide applications using Coptrol, suitable for use in potable water, waste water and irrigation water lagoons, as well as in lakes and dams.

- Aquatic Weed Control Herbicide applications, using specialised aquatic based herbicides targeted to the specific aquatic weed to be controlled.

- The application of water treatments for pH correction, phosphorous reduction treatments (such as Phoslock), the application of flocculants, etc.

We have specific craft available for all types of aquatic environments, including various size spray boats, amphibious craft and all terrain vehicles.

We can assist in determining the most suitable treatment for the specific aquatic environment, problem aquatic weed or algae and to correct various water quality issues.

Chemical Control:

Chemical control can often work extremely fast in removing the problem aquatic plants or weeds. Herbicides can be sprayed directly onto aquatic plants and weeds or can be added directly to the water.
